4. You can also use the clip function by using the scissors under playback view.

To playback these downloaded files as detailed in the previous documentation, and once downloaded to any standard PC, you can use any "real" player (vlc, divx, etc.) or use Windows Media Player with codec, available on our FTP.

-Recommend you use VS Player, from our FTP. This will let you merge, convert, multi playback and digital zoom.

CD/DVD Burning:

We do not sell Burners so we cannot offer any support in this area. I would assume you would want to convert the file from .mp4 to .avi, as most DVD players will auto a play a format like that better.
