## How to set up Cloud P2P

## Phone App

Cloud P2P is essentially a more secure replacement for Simpleddns. It allows connectivity for the mobile app to the camera system without using IP.

To set it up you need to go into the Cloud P2P app on your smart device and add an account. When you add the account you will receive an email to the address associated with the account you just created with a verification code, you would enter this code to activate your account. \*\*Note this code is usually only good for thirty minutes.

Now you are ready to add a recorder. In the cloud P2P page click the + sign (F1) and you will be prompted to
add the recorder either by scanning the QR code (F2) or by manually entering the serial number (F3) of the
Recorder.

• Once this has been done the recorder will show up with a mini cloud beneath it (F4). Finally enter the Device verification code (F5) found at the recorder Configuration, Access Platform, (enter Verification code) (F6)
